EDUCATION

University of the Thai Chamber of Commerce

Computer Engineering and Artificial Intelligence

2023 - Now

Eastern Technological College

Business Computer

2018 - 2021

HARD SKILL

- Python
- C/C++
- JavaScript
- HTML & CSS
- Bootstrap 5
- Git & Github
- Langchain, Ollama
- Chroma DB

SOFT SKILL

- Adaptability & Flexibility
- Teamwork & Collaboration
- Active Learning
- Problem-Solving
- Effective Communication

ABOUT ME

A driven 3rd-year Computer Engineering and Artificial Intelligence student at UTCC with hands-on experience in IoT programming and LLM applications, including developing a Local RAG Assistant. Fluent in English with a proven track record of adaptability and quick learning in fast-paced technical environments. Seeking an Internship to leverage my technical skills and contribute to innovative tech solutions.

EXPERIENCE

Smart Temperature-Controlled Fan System

- Designed and implemented an automated cooling system using Arduino to regulate fan speed based on real-time temperature data
- Utilized PWM techniques to achieve precise multi-level speed control
- Integrated a DHT sensor to monitor environmental conditions and displayed live data via Serial Monitor/LCD

Rain Detection and Notification System

- Developed an IoT-based weather monitoring system using ESP32 to detect rainfall in real-time
- Integrated Telegram Bot API to send instant push notifications to users' mobile devices when rain is detected
- Optimized sensor threshold logic to prevent false alarms from humidity or minor moisture

Local RAG Assistant

- Developed a secure, localized RAG system capable of querying private documents without external API dependencies.
- Implemented vector embeddings and text chunking strategies to optimize information retrieval accuracy.
- Designed a user-friendly chat interface for seamless document interaction

Lanuage

- Thai
- English
